I am Studying in Grade 11 in Gems Modern Academy. I am interested in Computer Science and took this internship to enhance my knowledge and skills in Computer Science.

My internship is at a firm which organizes many competitions and is partnered with Google, IBM and STEM leadership Center.

I was a part of a team, tasked with creating a magazine news website on Word press. I was responsible for adding and editing articles to our website as well as in charge of the aesthetics of the website. My role was putting articles to the website and its designing of taskbars and aesthetics.

Learning Outcome

The most valuable thing about my work experience was Teamwork and distributing responsibilities among team members. It has strengthened my intention to pursue Computer Science. It has also taught me how interact with people when working on a project in a professional manner.

I would recommend this internship to others. I learnt the different features available on WordPress and how to improve a website. It enhanced my organizational skills as my team was based in different countries and we had to co-ordinate to make sure we got our task done in time.

I would say I exceeded my expectations in this internship as I found completing the task easier than I expected. I accomplished creating a news magazine website with my teammates. One of the facets of my experience I liked was the co-ordination between my teammates. This internship has benefitted me by teaching me about WordPress and the process involved in creating a website.

"IT TAUGHT ME HOW TO INTERACT WITH PEOPLE IN A PROFESSIONAL MANNER WHEN WORKING ON PROJECTS TOGETHER"
